

## **LESSON 13**

- MISCELLANEOUS SYMBOLS
  - Unspaced Symbols
  - Spaced Symbols
  - Spacing with the Angstrom Unit and Tally Marks
- SUPERPOSED SIGNS
- AMBIGUOUS SIGNS
- MULTIPURPOSE INDICATOR
- REFERENCE SIGNS AND SYMBOLS

*Answers to Practice Material*

### **LESSON PREVIEW**

Symbols not previously covered are collected in this lesson. Spacing rules differ among the symbols; the spacing rules are grouped accordingly. Signs printed one atop another are examined. Several look-alike print signs are compared. After a review of the multipurpose indicator, four more uses of this indicator are explored. Reference signs in Nemeth context are discussed.

13.1.6 Factorial Sign

 Factorial Sign      !
---

➤  $n!$       

➤  ${}_5C_1 = \frac{5!}{1!4!} n!$       

Example 13-5

**Poisson Probability** People enter a line for the *Jack Rabbit Coaster* at the rate of 4 per minute. The following formula can be used to determine the probability that  $x$  people will arrive within the next minute.

$$P(x) = \frac{4^x e^{-4}}{x!}$$

where

$$x! = x \cdot (x - 1) \cdot (x - 2) \cdot \dots \cdot 3 \cdot 2 \cdot 1.$$

Determine the probability that  $x = 5$  people will arrive within the next minute.

1      

2      

3      

4      

5      

6      

7      

8      

9      

10      

11      

1

*Line 1: The paragraph heading is formatted as a cell-5 heading. Typeform (boldface) is disregarded in a cell-5 heading.*

*Line 2: The paragraph begins in cell 3, following the rules of the Nemeth Code.*

*Lines 7 and 9: Each displayed math expression begins in cell 3.*

*Lines 8 and 10: The narrative continues in the runover cell for paragraphs, cell 1.*

*Line 9: The last sentence can be interpreted either as a continuation of the same paragraph or as a new paragraph in which case it would begin in cell 3.*

---

## PRACTICE 13A

### Unspaced Miscellaneous Symbols

1.2<sub>^</sub>

$(v > \phi \hbar)$

R: 24 grams

$\|\nabla f(\mathbf{a})\|$

$\frac{\partial P}{\partial x} + \frac{\partial Q}{\partial y}$

$\{ \} \cap \{ \}$

$\binom{n}{r} = \frac{n!}{(n-r)!r!}$

$-\infty < x < \infty$

$f'(x) = 0$  or  $\infty$

$\int_a^b f(x) dx = F(x) \Big|_a^b$

$\int_{x=a}^{x=b} f(t) dt$

$(\exists x)(\exists y)[x + y = 85]$

$\exists |_x$

$\forall_x \in A$

---

Example 13-11

<u>BTB</u>	<u>ACR</u>	<u>pH range</u>
$5.55 \times 10^{-5}$	$2.57 \times 10^{-11}$	1.00-6.39
5.30 "	3.24 "	0.99-12.31
4.44 "	2.06 "	1.17-12.01

13.2.4 **Since (because)**

⠠⠨⠠⠨ Since (because) ⠠⠨

⠠⠨  $\because x = y, x^2 = y^2$

⠠⠨ ⠠⠨ ⠠⠨ ⠠⠨ ⠠⠨ ⠠⠨ ⠠⠨

⠠⠨  $(\because) RS = RT$

⠠⠨ ⠠⠨ ⠠⠨ ⠠⠨ ⠠⠨

*No space is left between the symbol and the grouping signs which apply to it.*

### 13.2.5 Therefore

Therefore		
⋮⋮	Normal	∴
⋮⋮⋮	Negated (it does not follow that)	∴

⤵ ∴ CM ⊥ AB    ⋮⋮    ⋮⋮⋮⋮    ⋮⋮    ⋮⋮⋮⋮

⤵ ∴ R = S    ⋮⋮⋮    ⋮⋮    ⋮⋮    ⋮⋮

Example 13-12

∴ the solution set is {±3}.

⋮⋮    ⋮⋮    ⋮⋮    ⋮    ⋮⋮⋮⋮⋮⋮⋮    ⋮⋮⋮    ⋮⋮    ⋮⋮    ⋮⋮⋮⋮⋮⋮⋮⋮⋮    ⋮⋮⋮

### PRACTICE 13B

#### Spaced Miscellaneous Symbols

1. Su bought 25 boxes of tissue for her classroom. Priced @99¢, can she pay with only one \$20 bill?

$$25 \times \$0.99 = \$24.75$$

$$\checkmark \$24.75 > \$20$$

*Answer:* No. Su needs more than \$20 to buy the tissues.

2. ∴  $8x + 3y = 15$ , substituting 0 for x gives  $8(0) + 3y = 15$ , or  $3y = 15$ . ∴  $y = 5$ .

## ***SUPERPOSED SIGNS***

### **13.5 Definition and Analysis**

Superposed signs are signs which are printed one upon another so that one sign extends beyond the boundary of the other. Contrast this with "shapes with interior modification" presented in Lesson 11, where one symbol is printed inside the boundaries of the other. Here are some examples of superposed signs.

$\oint$        $\subset$        $\Rightarrow$        $\ll$        $\sphericalangle$

In order to transcribe a superposed sign, the basic sign and the superposed sign need to be determined because the basic sign is transcribed first. The following order of preference is used as a guide. A symbol lower on the list is regarded as being superposed upon a symbol higher on the list.

Integral sign  
Signs of operation  
Horizontal and vertical bars  
Signs of shape  
Signs of comparison  
Signs not listed above

Here is an analysis the first three print examples shown above.

- $\oint$  The basic sign is an integral sign; the superposed sign is a sign of shape (circle).
- $\subset$  The basic sign is a sign of operation (dot); the superposed sign is a sign of comparison (inclusion).
- $\Rightarrow$  The basic sign is a vertical bar; the superposed sign is a sign of comparison (arrow).

If two signs belong to the same category, the superposition may be represented in either order, provided the same order is followed consistently throughout the transcription. Here is an analysis of the last two print examples shown above.

- $\ll$  Both signs belong to the same category – signs of comparison (nested "less than" signs).
- $\sphericalangle$  Both signs belong to the same category – signs of shape (an angle and an arc).

13.6.3 **Horizontal and Vertical Bars Modified by Superposition.** The most common symbols are shown below. Unlisted bars modified by superposition are transcribed in accordance with the rules for superposed signs.

⠠⠠⠠⠠⠠⠠	Horizontal Bar through inclusion sign	€
⠠⠠⠠⠠⠠⠠	Horizontal Bar through reverse inclusion sign	ƒ
⠠⠠⠠⠠⠠⠠	Vertical Bar through shaft of right-pointing arrow	➔
⠠⠠⠠⠠⠠⠠	Vertical Bar through shaft of left-pointing arrow	➔

➤ ⊖ ⠠⠠⠠⠠⠠⠠

*"Horizontal bar" is higher on the list than a sign of shape (the circle).*

13.6.4 **Signs of Shape Modified by Superposition**

➤ △ ⠠⠠⠠⠠⠠⠠

*"Triangle" is a sign of shape, which is higher on the list than "perpendicular to," which is a sign of comparison.*

When both signs are signs of shape, the superposition may be represented in either order, provided the same order is followed consistently throughout the transcription.

➤ ∠ ⠠⠠⠠⠠⠠⠠ ⠠⠠⠠⠠⠠⠠ ⠠⠠⠠⠠⠠⠠

*This arc shape extends beyond the boundary of the angle shape, making this a shape modified by superposition. Compare this symbol to the "angle with interior arc" (Lesson 11) which has a different braille form.*

When the print copy uses an "angle with interior arc" symbol throughout the text to simply mean "angle", the two-cell angle symbol may be used: ⠠⠠. A transcriber's note is required to inform the reader of the substitution. Sample note on the Transcriber's Notes page: "In print, the angle shape image includes an interior arc."

Signs of shape modified by superposition are spaced and punctuated as other signs of shape. (See Lesson 11).

13.6.5 **Two Signs of Comparison Modified by Superposition.** When both signs are signs of comparison, the superposition may be represented in either order, provided the same order is followed consistently throughout the transcription. Spacing and punctuation follow the same rules as for any other sign of comparison.

Equals Sign Through Inclusion Sign		
		
or		
Equals Sign Through Reverse Inclusion Sign		
		
or		
Nested Greater Than Signs (means "is large compared with")		
		with straight sides 
		with curved sides 
Nested Less Than Signs (means "is small compared with")		
		with straight sides 
		with curved sides 

13.6.6 **Negated Symbols and Tally Marks.** Negated symbols are not transcribed as superposed signs. As seen in Lessons 5 and 11, as well as in Section [13.2.5](#), negated symbols simply include dots 34 in their construction. Also, the print method of showing a group of five tally marks as a long diagonal stroke superposed on four vertical strokes does not follow the Nemeth rules for superposed signs, as shown in Section 13.4 above.

---

*Instructions:* See Lesson 11 to review shapes with interior modification, and Lessons 5, 11, and 13 regarding negated symbols.

**PRACTICE 13D**

<u>Superposed Signs</u>	<u>Interior Modification</u>	<u>Negated Relations</u>
$\phi$	$\odot$	$\therefore$
$\psi$	$\square$	$\neq$
$\ominus$	$\ominus$	$\nparallel$
$\nless C$	$\llcorner$	$\nless$
$5 \ll y$	$\angle_{45^\circ}$	$\notin$
$R \ni s$	$\textcircled{13}$	$\neq$
$Q \leftrightarrow R$	$\star$	$\dagger$

---

## *AMBIGUOUS SIGNS*

### 13.7 Context

Certain fonts can make it difficult to differentiate between print symbols for letters o, O, and the numeral "zero", or letters l, i, I, and the numeral "one". Additionally, certain print signs look similar to other print signs. The braille symbols may be altogether different. Transcribing the wrong symbol will give the reader false information. In order to assure your transcription is correct, search the surrounding context to determine the meaning of the sign. Magnification may help you identify it. If you are unsure, seek help from someone knowledgeable in the math or science topic who can correctly identify the print sign. Some examples are shown below.

$\phi$ $\varphi$ Greek letter phi	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	or	$\emptyset$ $\varnothing$ null set	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	
			or	$\cancel{0}$ canceled numeral zero	$\begin{matrix} \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot \end{matrix}$
			or	$0$ zero in certain fonts	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$
			or	$\Phi$ horizontal bar with superposed circle	$\begin{matrix} \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot \end{matrix}$
			or	$\theta$ Greek letter theta	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$
$\alpha$ Greek letter alpha	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	or	$\propto$ "varies as"	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	
			or	English letter "a"	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$
$\varepsilon$ Greek letter epsilon	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	or	$\varepsilon$ "membership"	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	
$\nu$ Greek letter nu	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	or	$\nu$ English letter "vee"	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	
$\Delta$ Greek letter Delta	$\begin{matrix} \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot \end{matrix}$	or	$\triangle$ triangle shape	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	
			or	$\underline{\Delta}$ logical product with underbar	$\begin{matrix} \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot \end{matrix}$
$<$ "less than"	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	or	$\langle$ opening angle bracket	$\begin{matrix} \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot \end{matrix}$	
			or	$<$ left-pointing caret	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$
$>$ "greater than"	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	or	$\rangle$ closing angle bracket	$\begin{matrix} \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot \end{matrix}$	
			or	$>$ right-pointing caret	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$
$\parallel$ two vertical bars	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	or	$\parallel$ "is parallel to"	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	
			or	$\parallel$ two separate vertical bar symbols	$\begin{matrix} \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot \end{matrix}$
$\wedge$ mathematical caret	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	or	$\wedge$ logical product	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	
			or	$\hat{\ }$ literary (UEB) caret	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$
			or	$\circ$ circumflex	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$
$\sqrt{\ }$ radical sign	$\begin{matrix} \cdot \\ \cdot \end{matrix}$	or	$\checkmark$ checkmark	$\begin{matrix} \cdot & \cdot \\ \cdot & \cdot \end{matrix}$	
$\neg$	Is it a right-pointing arrow with lower-only, straight arrowhead			$\begin{matrix} \cdot & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \cdot \end{matrix}$	
	or a long-division structure?				
	or the logic "negation" symbol?				

13.7.1 **Vertical Bar and Colon.** The symbols that give transcribers the most trouble due to their ambiguity are the vertical bar and the colon. The vertical bar can be a grouping sign, an operation sign, a comparison sign, or an “end of proof” symbol. The colon can be a ratio symbol or a punctuation mark. You need to recognize the meaning of the sign in order to transcribe the proper symbol.

- ⋮ Vertical bar used as a sign of grouping, or as a sign of operation meaning "is a factor of", or as a sign of comparison meaning "such that" or "given"
- ⋮ ⋮ Colon used as a ratio symbol
- ⋮ Colon used in digital time, or meaning "is to", or meaning "such that", or used in mapping notation, or used as sentence punctuation. Preceded by a punctuation indicator when unspaced.
- ⋮ ⋮ ⋮ ⋮ ⋮ Boldface vertical bar as an “end of proof” icon.

13.7.2 **Spacing.** Some signs use the same braille symbol but have different spacing rules depending on their meaning. You can't depend upon the print copy to show the spacing according to Nemeth rules so you need to recognize the meaning of the sign in order to apply proper spacing. Generally speaking, signs of comparison are spaced; signs of operation are unspaced; punctuation marks are followed by a space but not preceded by a space; signs of grouping are preceded by a space (opening) or followed by a space (closing).

- | Is the vertical bar a grouping sign, an operation sign, or a comparison sign?
- ~ Is the tilde an operation sign ("not") or is it a comparison sign ("is related to" or "is similar to")?
- ' Is this an apostrophe or single quotation mark (a punctuation mark) or is it a math symbol (prime sign)?
- / Is the slash mathematical (meaning "per", "over", or "divided by") or is it a UEB solidus?
- : Are the two vertical dots a ratio symbol (a sign of comparison) or are they a punctuation mark?

13.7.3 **Capital Greek Letters.** Some capital Greek letters are indistinguishable from English letters. Unless the text identifies the letter as Greek, you can safely assume it is an English letter.

13.7.4 **Chemical Notation.** Some signs have yet another meaning in chemical notation. For example, the following symbols can be certain types of chemical bonds.

= || ≡ — | / \ · : ::

Details can be found in *Chemical Notation Using the Nemeth Braille Code*.

## MULTIPURPOSE INDICATOR

$\cdot\cdot$ Multipurpose Indicator
-------------------------------------

### 13.8 Review

In addition to being a baseline indicator, dot 5 assumes several other functions in the Nemeth Code. Dot 5 is called the *multipurpose indicator* in the following situations which have been discussed previously.

- A multipurpose indicator is used between two unspaced signs to indicate that they are printed horizontally.
  - side-by-side plus and minus signs. See Section 5.2.
  - side-by-side tildes. See Section 5.4.9.b.
  - side-by-side signs of comparison. See Section 5.9.
  - a number printed on the baseline to the right of a letter. See Section 6.11.1.c.
  - consecutive superscripts and subscripts. See Section 6.16.
  - side-by-side arrows. See Section 9.12.
  - side-by-side modifiers within a sign of shape. See Section 11.17.
- A multipurpose indicator is used between a regular polygon representing a sign of operation and a numeral immediately following it. See Section 11.29.
- A multipurpose indicator begins a modified expression. See Section 12.2.
- A multipurpose indicator is placed between a tally mark and a following punctuation indicator to avoid misreading the similar symbols. See Section 13.4.c.

### 13.9 Additional Uses of the Multipurpose Indicator

13.9.1 **Letter Followed by a Decimal Point and a Numeral.** When a letter on the baseline of writing is immediately followed by a decimal point and a numeral, a multipurpose indicator is placed between the letter and the decimal point to show that the decimal point and numeral are not subscripts to the letter.

➤ x.4      $\cdot\cdot$   $\cdot\cdot$   $\cdot\cdot$   $\cdot\cdot$

13.9.2 **Numeric Subscript Followed by a Numeral.** A multipurpose indicator is used after a numeric subscript if the subscript is followed by a numeral on the baseline of writing.

➤  $x_7$ 10      $\cdot\cdot$   $\cdot\cdot$   $\cdot\cdot$   $\cdot\cdot$   $\cdot\cdot$

## REFERENCE SIGNS AND SYMBOLS

### 13.10 Usage and Code Switching

Reference signs are used in both literary and technical context. The code used depends on the surrounding text. Within UEB context, UEB symbols are transcribed and UEB spacing rules are followed. Within Nemeth context, the Nemeth symbols are transcribed and Nemeth spacing rules are followed.

- 13.10.1 **Asterisk, Daggers, Star, and Other Symbols.** We have seen these symbols being used elsewhere, in other contexts. The asterisk and the daggers were introduced in Lesson 5 as operation signs; the star was introduced in Lesson 11 as a sign of shape. When these signs are used as reference markers within Nemeth context, the familiar symbols are transcribed.

⠠⠠⠠⠠	Asterisk	*
⠠⠠⠠	Single Dagger	†
⠠⠠⠠⠠⠠	Double Dagger	‡
⠠⠠⠠⠠	Star	☆

When a reference sign occurs for which no provision exists in the Nemeth Code, the transcriber devises a suitable symbol. The symbol must be identified in a transcriber's note or listed on the Special Symbols page, as appropriate.

- 13.10.2 **Numerals or Letters.** When reference to a footnote is denoted by a number or a letter, the general reference indicator is used. The number or letter immediately follows the indicator. A numeric indicator or English-letter indicator is required.

⠠⠠⠠	General Reference Indicator
-----	-----------------------------

- 13.10.3 **Layout and Spacing.** Reference signs are often printed in the superscript position, unspaced from the referenced item. In Nemeth context, the superscript position is ignored and the reference symbol is spaced away from the word, letter, or number to which it applies. Note that these rules differ from those which apply in UEB context.

If there is a punctuation mark associated with a reference symbol, no space is left between them. Follow print as to the left-to-right order of reference sign, item being referenced, and punctuation.

The samples below show each reference sign transcribed using the Nemeth symbol.

*Reference sign is printed before the item*

➤ \*6.3      ⠠⠠⠠ ⠠⠠⠠⠠⠠

➤ †2.6      ⠠⠠⠠ ⠠⠠⠠⠠⠠

*For further practice, see Appendix A—Reading Practice.*

### **EXERCISE 13**

Prepare Exercise 13 for your grader.

# PRACTICE 13D

1			
2			
3			
4			
5			
6			
7			
8			
9			
10			
11			
12			

*Guide dots are not used because the items are not related across the rows.*

### PRACTICE 13E

1. A multipurpose indicator is used when a letter is followed by a numeral and they are both on the baseline of writing.
2. The first dot 5 is a baseline indicator because the plus sign is on the baseline and it follows a raised hollow dot. The second dot 5 is a multipurpose indicator which is needed to show that the numeral "3" is not a subscript to the letter "n".
3. The same rule applies to letters in any alphabet – a multipurpose indicator is needed to show that the numeral "2" is not a subscript to the Greek letter pi.
4. Same as #3 regarding Greek letter omega followed by numeral "2" in " $\omega^2$ ". Note that a multipurpose indicator is not needed for a letter following a numeral, as in " $2\omega$ ".
5. A baseline indicator precedes the plus sign, following the subscript "12". (The multipurpose indicator is not used following the "t" and "e" because they represent numerals in base 12.)
6. A multipurpose indicator is needed after the second numeric subscript "0" because the subscript is followed by a numeral on the baseline of writing ("2").
7. The function of the first and third dot 5 is the same as item 6. The second dot 5 is a baseline indicator which is needed for the minus sign following a superscript.
8. A multipurpose indicator is needed after the decimal point because the next symbol is not a numeral—it is the Greek letter "alpha".
9. A multipurpose indicator is needed after the decimal point because the next symbol is not a numeral—it is a percent sign.
10. A multipurpose indicator is needed after the decimal point because the next symbol is not a numeral—it is a long dash.
11. A multipurpose indicator is needed after the decimal point because the next symbol is not a numeral—it is a plus sign.
12. A multipurpose indicator is used between two unspaced vertical bar symbols (in this case, each is a "double vertical bar" symbol) when the first is a closing sign of grouping, and the second bar is an opening sign of grouping.
13. A multipurpose indicator is used between vertical bars which are nested grouping symbols.
